

How to Clean & Protect Tires

Clean

Spray On → Scrub → Damp Towel → Dry Towel

- 1 Spray **Wash Wax ALL Degreaser** on the tire
- 2 Scrub the tire with an **Aero Scrubber** or soft brush
- 3 Wipe the tire with a damp towel
- 4 Wipe the tire with dry towel

Protect

Spray On → Soak → Damp Towel → Dry Towel

- 1 Spray **Rubber Care** on the tire
- 2 Let soak for a minimum of 30 minutes
- 3 Spray **Wash Wax ALL** (blue) on the tire
- 4 Wipe the tire with a dry towel

NOTE:

- We recommend removing excess **Rubber Care**, after the soaking period, to prevent the tires from attracting dirt. Excess **Rubber Care** can be removed with a damp towel or by spraying **Wash Wax ALL** (blue) on the tire and wiping it off with a dry towel.
- **Rubber Care** gives tires a deep black satin look, like a new tire, without leaving the tire looking oily and wet.
- You can use **Belly Wash** or **SafeSolv** to remove brown stains from white walls or white lettering.
